Work Experience

Intellect Design Arena (Joined in July 2024 - currently working)

- Own complete product lifecycle for derivatives platforms: Created 12-36 month strategic roadmaps, own product backlogs in Jira and led solution architects ending with delivery.
- Lead the product lifecycle from ideation>solution>development>delivery.
- Helped in Demo to presales, RFP analysis, second level demo.
- Have performed requirement gathering from multiple clients, PWT, solution design, feasibility study, fitment analysis as well as working with engineering and delivery to client as per agile principle.
- Expertise working in capital market, derivatives (vanilla and structured), pricing and valuation, market risk, Vars, predictive analytics, Limit Management, compliance, settlement, payments, documentation
- Have worked with Front office, Middle office and Backoffice with understanding of end to end trade lifecycle.
- Handle a team of 4 and provide constant guidance and support.
- Personally, I can code in Python and have created many prototypes of derivative and quantitative models and also have good understanding of database. Quantitative models in Python such as - Time series, predictive analytics, Value at Risk, Option pricing models, MonteCarlo Simulation models, LSTM model.
- Have created various AI models which are used for automation and efficiency and have added Gen AI to our product.

Bank of America (May 2016 to July 2024)

- Worked as part of change management team and have experience in owning delivery of derivative products.
- Worked with various teams including structured derivatives, Trade Support, Risk Management, documentation etc.
- Worked in multiple asset class – Foreign Exchange, Money Market, Equity, Credit market
- Experience working with different team of Front office, Middle office and back office
- Few keywords that I worked - Process improvements, risk control developments, change management initiatives, Stakeholder management
